

Dr. Angela DeRosa, DO, MBA, CPE, is a dynamic professional on a mission to change the face of women's health and wellness. As a respected, internationally recognized authority on women's hormonal health, Dr. DeRosa understands the range of health issues women face leading up to and during menopause. She experienced early menopause at age 35, with symptoms beginning in her mid-twenties, while she was attending medical school. In her quest to find out what was happening to her, it became clear that understanding, research and treatment for this critical phase of women's health was woefully inadequate.

She resolved to change it.

Dr. DeRosa found her passion and embarked on a lifelong career specializing in women's health with an emphasis on the importance of balanced hormones as a foundation for better health. While still in her residency, she developed the nineteenth women's health program in the nation.

As Senior Medical Director, Dr. DeRosa worked for Procter & Gamble to help launch osteoporosis treatments and testosterone replacement for women. During her years with the pharmaceutical division, she saw firsthand how women's ability to get proper medical care and treatment is thwarted due to politics, gender bias and poorly trained physicians. Her mission is to teach women about what's happening to them physically, how they can obtain proper treatment, and how to change the paradigm of medicine so women everywhere can live healthier and happier lives.

Dr. DeRosa has more than 20 years' experience in the medical field, both on the pharmaceutical side and in clinical practice. She is the founder of DeRosa Medical, with offices in Scottsdale, Glendale, and Chandler, Arizona. Patients come to see Dr. DeRosa from as far away as Germany, Peru, Mexico, Hawaii, Alaska and many of the 48 contiguous states.

Dr. DeRosa is a member of the International Menopause Society, European Endocrine and Menopause Society, International Society of the Study of Women's Sexual Health and a researcher on women's health issues. She is a frequent speaker for the osteopathic medical community on women's health issues, and has spoken at the national American Osteopathic Association's Continuing Medical Education meeting, the Arizona Osteopathic Medical Association's bi-annual meeting, The Academy of Anti-Aging Medicine, and in various other medical communities. Dr. DeRosa is Clinical Assistant Professor at Midwestern University, Arizona College of Osteopathic Medicine, and Board Member and President for the Board of Trustees for the Arizona Osteopathic Medical Association.

In 2016 Dr. Angela DeRosa wrote an important book with a controversial title, "How Your Doctor is Slowly Killing You: A Woman's Health Survival Guide." The public, media, and medical community took notice. In fact, she received an avalanche of requests from physicians across the country wanting to learn more.

Continued...

Dr. DeRosa decided to take her 20 years of experience and help change the face of women's health care by working WITH physicians. She launched a hormonal health consultancy, for physicians seeking medical and practice development training on bio-identical hormone replacement therapy, with an emphasis on pellet therapy. The new endeavor is called The Hormonal Health Institute: Executive Instruction for Medical Professionals.

The Institute offers physicians a variety of training formats and programs including live concierge-level one-on-one training in the physician's office, live and recorded webinars, self-paced digital classes, online group workshops, phone/email/Skype follow up support and peer support for physicians.

In addition, Dr. DeRosa is launching a digital education platform, www.drhotflash.com, with two channels; one for physicians and one for consumers seeking easy to understand and comprehensive hormone health content for women, as well as providing a community for women seeking to share experiences.

Dr. DeRosa's new endeavor has caught the attention of the world's largest gathering of anti-aging physicians, The Academy of Anti-Aging Medicine (A4M) where she will be a featured speaker at the A4M World Summit.

Now Dr. DeRosa splits her time between educating the general public on women's health and menopausal issues and educating physicians. She has updated her book and the 2nd edition will be released in the Fall of 2018 with the new title, *A Woman's Hormonal Health Survival Guide: How to Prevent Your Doctor from Slowly Killing You*.

An avid cat lover, in 2017, Dr. DeRosa launched KARE for ME, a 501(c)(3) non-profit foundation dedicating to providing grants, support and funding for local, no-kill animal shelters and scholarships for students pursuing a degree in veterinarian shelter medicine.

Dr. DeRosa lives in Scottsdale, Arizona.

Health issues in women of all ages can often be traced to one root cause: hormone deficiencies.

Hormone deficiency isn't just about menopause – women can suffer from hormone deficiencies from the onset of puberty. Short term, it's a serious concern sapping energy, causing mood disorders, memory problems and putting a damper on libido. Long term, untreated hormone deficiencies are contributing factors in developing heart disease, diabetes, bone loss, obesity, cancer and other chronic health issues.

Most medical professionals aren't trained to properly diagnose and treat hormone deficiencies.

Most doctors don't understand the impact of hormone deficiencies on overall health, so women are suffering, and even dying, needlessly. The lack of knowledge and training for medical providers is just part of the problem. The deep-seated gender bias in American culture, within medicine, and in our politics in conjunction with the unbridled power and deep pockets of the pharmaceutical industry is a deadly combination, working against the best interests of women and their healthcare.

American women can expect to live one-third of their lives in menopause.

The average age of menopause in the U.S. is 52. Since menopause is a natural state, most doctors dismiss the symptoms and serious health risks associated with it.

In the U.S., 18 percent of the population – or 45.6 million women – are in menopause.

There are 500 million menopausal women worldwide. According to Menopause Practice: A Clinician's Guide, there were 1.1 billion women in menopause in 2015. This doesn't even account for the millions of non-menopausal women with hormonal deficiencies.

One in three women will have thyroid issues by the age of 50.

Many women with thyroid disease remain undiagnosed and untreated because their provider relies solely on standard TSH blood screen, which is not the best indicator of true thyroid function. Thyroid issues are also a problem for men, as one in five will have thyroid problems by age 50.

Working properly, a woman's body makes 60 percent estrogen and 40 percent testosterone.

In contrast, a man's body makes 95 percent testosterone and 5 percent estrogen, proving that women are more balanced, much to the disbelief of the male half of the species.

Testosterone deficiency - what are the symptoms?

Hallmarks include low libido, weight gain, low, anxiety, depression, mood swings, memory loss, sugar cravings and a "beer belly" appearance from weight gain. This usually starts in the mid- to late-30s, but certain medications, illness, and genetics can cause it to begin sooner.

Estrogen deficiency or perimenopause: what to expect in the early, mid and late stages.

During the early stage of estrogen deficiency, many women experience hot flashes and insomnia right before and during their period. Premenstrual syndrome (PMS) gets worse, and they may have migraines for the first time in their lives.

The mid-stage of estrogen deficiency sees hot flashes during random times throughout month (not just during periods), worsening PMS (just when they thought it couldn't possibly get any worse), insomnia, forgetfulness and night sweats.

Late stage is usually marked by irregularity in menstrual cycles, and worsening symptoms overall. Women might go several months without getting a period, but suddenly they return, often becoming heavier, more frequent and longer lasting.

Dr. DeRosa provides expert commentary on stories and controversies of the day.

Dr. Angela DeRosa is an internationally recognized expert in women's hormonal health. She speaks on a range of topics related to common symptoms of hormone deficiencies as they relate to overall health and wellness in women and in men. Custom programs and seminars can also be developed upon request.

Hormones: Why Deficiencies Make Us Fat, Sick, Irritable & Sexless

Dr. DeRosa educates women about the symptoms and dangers of hormone deficiency – everything from fatigue and loss of sex drive to heart disease, pre-diabetes, bone loss and stroke.

Hormone Deficiencies in Women: How They Happen & How They Harm Our Health

Dr. DeRosa discusses in layman's terms the main causes of hormone deficiencies – including oral birth control and other medications, hysterectomy, perimenopause and menopause – and how they affect the body and overall health.

Bio-identical vs Synthetics in HRT: Myths, Misconceptions & the Ugly Truths You Need to Know

Dr. DeRosa discusses the difference between synthetic and bio-identical hormones, and reveals why the startling Women's Health Initiative study on hormone replacement therapy – widely reported in the early 2000s – was bunk. Learn how big pharma is lobbying against bio-identical HRT and why. A definite eye-opener!

Menopause & Memory Loss – No, You Are NOT Crazy

Dr. DeRosa shares tips that every woman should know about menopause and its most debilitating symptoms. Learn why these symptoms happen, and what can be done to treat them.

Thyroid Disease: Why Your Doctor is Usually Wrong

Dr. DeRosa exposes the truth about thyroid disease, why so many doctors miss this critical diagnosis and why replacing the thyroid hormone is so important to staying healthy at all stages of life.

What Women Need to Know About Hormone Replacement Therapy

Dr. DeRosa provides no-nonsense information about hormone replacement therapy, including how it's done, the costs, and risks and rewards and why you must be an advocate for your own health.

How Your Doctor is Killing You: A Woman's Health Survival Guide - Checklists & Health Tips

Dr. DeRosa shares tips that every woman should know when seeing a physician, including checklists of important lab work, questions to ask and how to tell if you're getting proper treatment.

Men & Their Mojo: The Myths & Misuse of Erectile Dysfunction Drugs

Dr. DeRosa discusses the underlying causes of ED, or erectile dysfunction, what men really need to know about Viagra, Cialis and testosterone, and when each is appropriate to treat erectile dysfunction. Men learn how to get their groove back in the bedroom, and live healthier lives.

Dr. DeRosa is a frequent speaker at health care industry events. She has spoken at the national American Osteopathic Association's Continuing Medical Education meeting, the Arizona Osteopathic Medical Association's bi-annual meeting, and in various other medical communities. Most recently, Dr. DeRosa was asked to speak to physicians from all over the world attending the prestigious The American Academy of Anti-Aging (A4M) World Congress.

The following topics are the most requested but custom lectures can also be developed:

Treating to Optimal Health:

Top ten treatments to slow aging and prevent chronic illness.

Conventional Hormonophobia to Reasonable HormonoTherapies:

Separating fact from fiction.

Become a Chef and Not a Cook:

How to learn from conventional medicine while advancing and innovating medical therapies.

How Modern Medicine is Slowing Killing Women:

Becoming part of the solution and not the problem.

The Art of Choosing Hormonal Therapies for Men and Women:

A beginners guide to treating with estrogen, testosterone and thyroid.

From Maxed Out Credit Cards to SOLD!!

A professional journey toward building a platform company in medicine.

You Took a Hormone Course, Now What?

The nuts and bolts of building a hormonal practice from operations, marketing and legal aspects.

Is Your Thyroid Making You Fat?

Cellular Hypothyroidism and Metabolism.

Lovin' Libido Loca: Celebrating Gender Differences and Sexuality.

I Was In Menopause At 35

A medical professional mission to change the paradigm of hormonal health in America.

When It Comes To Healthcare, Women Are Getting Dismissed!

A Woman's Hormonal Health Survival Guide: How to Prevent Your Doctor From Slowly Killing You takes a frank, tell-it-like-it-is look at the state of women's health.

Common health conditions in women of all ages can often be traced to one root cause: hormone imbalances and deficiencies, and women can have them from the onset of puberty.

In the short term, untreated hormone deficiencies sap energy, cause mood disorders, memory problems and put a damper on libido. In the long term, deficiencies are contributing factors in developing heart disease, diabetes, bone loss, obesity, cancer and other chronic health issues.

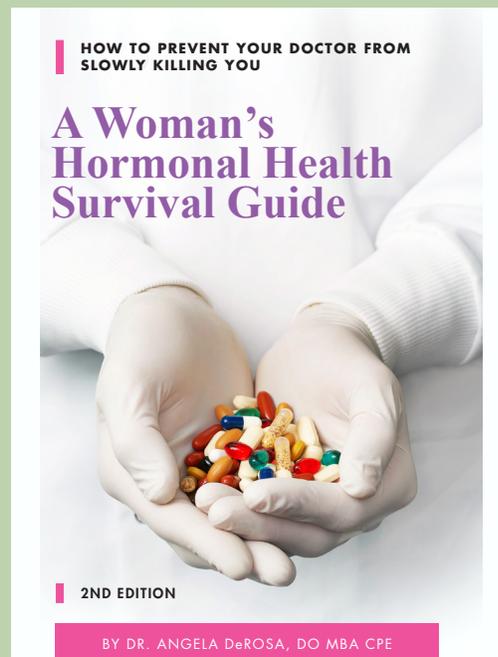

LEARN:

- Why the 2002 Women's Health Institute study on HRT therapy is bunk and scared women and their doctors
- The short- and long-term dangers of hormone deficiencies and how to recognize the symptoms before it's too late
- The root causes of hormone deficiencies and how they affect your body and your overall health
- Commonly prescribed medications that could be making you sick
- No-nonsense information about hormone replacement therapy
- Tips that every woman should know when seeing their doctor
- How to tell if you're getting proper treatment
